
Slimline Overhead Matt Black Door Closer With Backcheck

Product Images

Short Description

- Matt black overhead door closer
- Features individual controls for door speed, latching action and backcheck.
- Can be adjusted to suit door widths up to 1250mm wide.
- EN power size - 2-5.
- Max Door Width / Weight – 1250mm / 100Kg.
- Adjustable closing speed.
- Adjustable latch speed.
- Power adjustable by spring.
- Adjustable backcheck.
- Universal application (Fig 1, 6 & 61) - Suitable for all opening applications including "pull-open", "push-open" & "transom mounting".
- CE marked against EN1154 in fig 1 and fig 6 positions only..
- Included in successful fire test to EN1634.

- Certifire approved.
- Declaration of performance (DoP) available

Description

- CE / UKCA Marked
- Fire Rated
- Certifire Approved - EN1154
- Power Size 205
- Adjustable via spring
- 240mm x 69mm x 49mm

Finish

- Matt black
- Supplied with a slimline semi-radius silver cover and matching matt black arms.

Fixing Positions & Mounting Options:

- Out of the box, this black door closer can be fitted in three fixing positions, including the push side of the door (figure 1), pull side of the door (figure 6) and transom mounted (figure 61).
- **Figure 1 - pull side mounting - (covered under the CE mark - suitable for use on fire doors).**
 - Closer fitted to the pull side of the door
 - Body fitted to the door with arms fitted to the door frame.
 - In this position the closer arms will project out from the door into the room.

- **Figure 6 - push side mounting - (covered under the CE mark - suitable for use on fire doors).**
 - A closer is fitted to the push side of the door.
 - The body is fitted to the door with arms fitted to the door frame via a parallel arm bracket (supplied with each unit).
 - In this position, the closer arms will lie flat against the door, running parallel to the door frame.
 - Sometimes known as figure 66.

Door Closer Fitted To
The "Push" Side Of The Door
With Parallel Arm Bracket

- **Figure 61 - Transom mounted to the push side of the door** (Please note this option is not covered under the CE mark and should not be used on fire doors).

- Closer fitted to the transom on the push side of the door.
- Body fitted to the transom (door frame) with the arms fitted to the door.
- In this position, the closer arms will project out from the door into the room.

Transom Mounted

Door Closer Fitted To
The "Push" Side Of The Door
Mounted On The Transom

Power Adjustment Via Spring:

- This closer can be adjusted to suit door widths from 850mm to 1250mm EN power size 2-5 by means of a separate power adjustment by means of an Allen key at the end of the closer body.

EN Power Size Setting	Maximum Door Width (mm)	Maximum Door Weight (kg)
2	850mm	40kg

3	950mm	60kg
4	1100mm	80kg
5	1250mm	100kg

Adjustable Closing Speed:

- The closing speed can be adjusted by turning a small screw in the body of the closer.
- By turning the screw in the body the rate at which oil flows through the closer changes in turn controlling how fast the closer will shut the door.
- Speed adjustment can be controlled from approximately the first 180 degrees down to the last 15 degrees of the closing cycle.

Adjustable Latch Action:

- The last 15 degrees of the closing cycle is known as the latch action or snap action. It is designed to help give a door closer a little extra force to help it overcome any door seals, or latches that might prevent the door from closing within the frame.
- The latch action can be adjusted by turning a screw in the body of the closer.
- By turning the latch action off or very low, the door closer will softly close into the frame. By turning the latch action to its maximum setting the door closer will push into the door frame with extra force.

Adjustable Backcheck:

- This function slows and or stops the door during it's opening cycle so that it cannot be flung open violently and damage adjacent walls.
- Backcheck function can be adjusted by turning a small screw in the body of the closer.

Closer Dimensions:

- Body Length - 236mm
- Body Height - 55mm
- Body Depth - 38mm
- Cover Length - 240mm
- Cover Height - 69mm
- Cover Depth - 49mm

Opening Forces - BS 8300:

The opening force (0-30 degrees) is less than 30N when fitted to a minimum door width of 900mm when fitted in figure 1 fixing position and to a minimum door width of 826mm when fitted in figure 6 fixing position.

The opening force (30-60 degrees) is less than 22.5N when fitted to a minimum door width of 826mm.

Therefore, to meet the requirements of BS 8300 the minimum door width when fitted in figure 1 position is 900mm. When fitted in figure 6 position the minimum door width is 826mm
