
Perkomatic Door Closer

Product Images

Description

- Uncontrolled door closing
- Suit interior doors to 75kg
- Adjustable latching action
- Fully reversible
- Ideal for light to medium duty applications
- A Fully concealed door control fitted into the hinged edge
- Operated with a strong twin spring assembly
- Unlike overhead closers, this closer allows the door to be shut ahead of the closing action
- **This product is not suitable for use on fire doors in the United Kingdom or European Union, either in a new installation or as a replacement on a notional fire door.**

Products intended for use on fire doors in these areas must carry the CE mark. Where door closers are concerned, currently, this means that only controlled door closing devices can be used. CE marking of uncontrolled devices is not currently available, as the necessary harmonised European standard has not been published.

This is an uncontrolled door closer. Therefore, it cannot be CE-marked and should not be used on fire doors in areas where CE marking is mandated.
